Excerpt: ... thrice a (3ay, for a quarter of an hour at a time, in equal quantities of water and milk warm. If, by suppreffion of the gonorrh?a, or from any other cause, a testicle becomes swelled and painful, and the scrotum red; let him be bled immediately, the somentation N 12. applied to the testicle, and let him drink plentifully of the decoction N i, adding twenty grains of nitre to each pint. After the redness, swelling, and Fever, which often attend swelled testicles, are appeased, it will be proper to make use of tb remedy N 66. If venereal buboes grow hard, a plaister of galbanum is to be applied. The ITCH T S a very troublesome distemper to Armies, and immediately spreads by contact, unless the affected soldiers are separated from thole who are well. Though all the external parts of the body may be affected, yet the Itch most commonly (hows itself first on the hands, principally F between between the singers: first appears a pustule, or two, full of a fort of clear water, which itch extremely: when these pustules are broke by scratching, the water that issues out communicates the disorder to the neighbouring parts, lc is not easy in the beginning to distinguish the Itch, unless one is well acquainted with this disorder: but in its progress the pustules augment both in number and size; and when opened by scratching, a disgustful crust is sormed, and the evil gains the superficies of the whole oedy. Hitherto the Itch hath its seat between the epidermis and the skin; but if it continues long, it makes way through the lkin into the membrana adiposa, where it sorms small ulcers, commonly in great number. This sort of Itch is the nastiest and worst, and at the some time extremely contagious. It it to be treated in the
