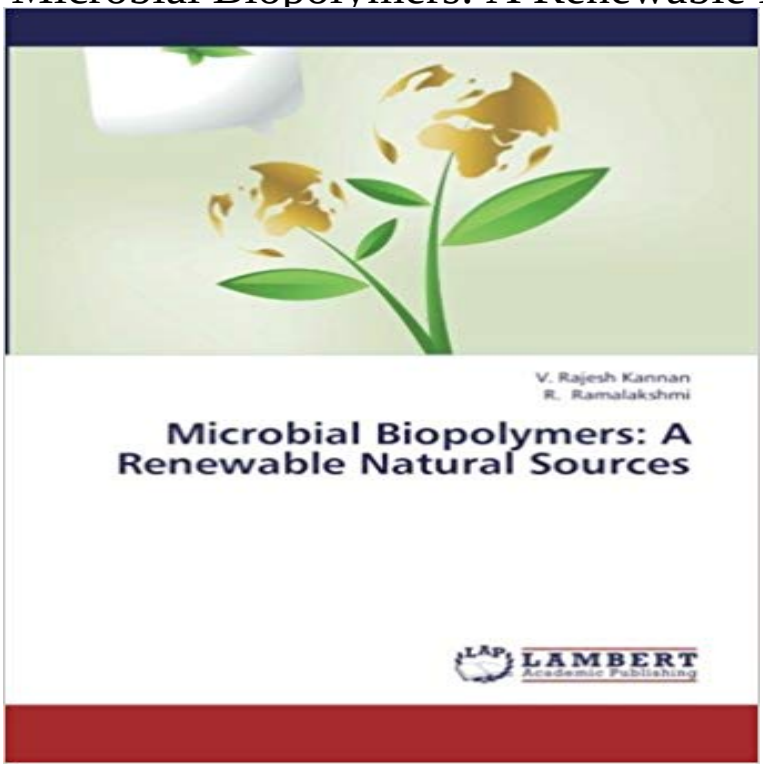
Microbial Biopolymers: A Renewable Natural Sources



The biopolymers could provide new and forward-looking solutions for the polymer industry as they can potentially be applied in all market segments where polymers are used. Some biopolymers products even offer new end of life options such as biodegradability that can benefit certain products. In addition to these major advantages is potentially very low carbon footprint, less energy costs for manufacturing and improved worldwide acceptability. We assume as stated above, our selected agro-based natural samples may fulfill the eco-friendly objective and this book also consists parts are focusing on the emerging problems in the field of synthetic biology
